JAPA 450 FIREWOOD HARVESTER

Japa 450 harvester suits both small and large timber. A hydraulic chainsaw cuts timber up to 450 mm diameter quickly and easily. It is fitted with a 24 ton splitting cylinder and an automatic speeding valve, which always reaches the optimal capacity no matter if 150 mm or 450 mm diameter timbers are processed.

Japa 450 is equipped with a 4 meter hydraulic out-put conveyor that can be hydraulically turned 2 meters from side to side.

Eight hydraulic levers control functions like feeding, cutting, splitting, adjusting conveyor etc. The splitting knife can be changed with the help of a winch.

Japa 450 -HARVESTER – technical data

· Cutting	hydraulic chainsaw
· Saw bar	20"
· Saw chain	0,404" - 71 links
· Max. wood diamer	450 mm
· Max. wood length	660 mm
· Splitting trough	one
· Own hydraulics	yes
· Power requirement	15 kW
· Splitting cylinder	Ø 70 + 100 mm
· Knives	8 and 12
· Splitting knife adjustment	hydraulic
· Oil tank volume	100 l
· Infeed conveyor length	2700 mm
· Infeed conveyor belt width	300 mm
· Log holder	hydraulic, driving
· Out-put conveyor length	4m
· Out-put conveyor width	400 mm
· Conveyor turning / lifting	hydraulic
· Machine weight	c. 2 tonne
· Machine max. height in working position	3100 mm
· Machine max. height in transport position	2600 mm
· Machine max. width in working position	8500 mm
· Machine max. width in transport position	3300 mm
· Machine max. length in transport position	1800 mm

The manufacturer recieves right to make tecnical changes.
