JAPA **CLEANING DRUM** **and LOG DECKS**

Efficiency and speed to
firewood production

JAPA CLEANING DRUM and LOG DECKS

Japa cleaning drum will separate trash and slim wood slices out of homogenous firewood output.

The wheel is on a pedestal, e.g. a cart can be placed under it.

Tournable discharge chute will guide cleaned wood to desired direction.

The Cleaning drum, technical information

Width:	120cm
Height:	300-400 cm (adjustable)
Length:	330cm/260cm
Rotating speed:	12 rounds/min
Inclining:	+/- 25 °

Japa log deck allows mechanical loading and increases productivity by reducing manual handling.

Timber capacity is 6 cubic meters.

The Hydraulic Timber Deck uses a hydraulic motor on both sides of the conveyor to rotate the chain. The rotation speed is variable.

The Log deck, technical information

Width:	125-185 cm (adjustable)
Height:	84-102 cm (adjustable)
Length:	210 cm
Weight:	160 kg
Loading capacity:	3000 kg

The Hydraulic Timber Deck, technical information

	Deck	extension
Width:	160-220 cm (adjustable)	250cm
Height:	75-100 cm (adjustable)	100-120cm (adjustable)
Length:	250cm	300cm
Length, chain section:	200 cm	
Weight:	380 kg	215 kg
Loading capacity:	9000 kg
